ISLAMIC ECONOMICS

Economics is considered a modern discipline, but has actually existed for several centuries. With the rise of industrialization and mass production in the 20th century, numerous challenges have emerged, prompting the search for a superior alternative. As Islam encompasses a complete way of life with its own laws, Islamic Economics continues to rise in popularity as a significant area of study, due to the crucial role of banking and finance. Consequently, professionals with this unique qualification are in demand, as more institutions investigate its application.
